2.4 Accessing embedded previews

Images may embed previews (also called thumbnails) of various sizes in their metadata. pyexiv2 allows to easily access them:

```
>>> previews = metadata.previews

>>> len(previews)
2
```

They are sorted by increasing size. Let's play with the largest one:

```
>>> largest = previews[-1]

>>> largest.dimensions
(320, 240)

>>> largest.mime_type
'image/jpeg'

>>> largest.write_to_file('largest')
```
